

Perlen Packaging GmbH, Müllheim, Neuenburger Strasse 9, 79379 Müllheim, Germany

Requirements for the formulation of offers for energy-related procurements

Dear Sir or Madam,

Perlen Packaging GmbH, Müllheim practises an Energy Management System according to DIN EN ISO 50001. In this sense, we live our processes in an energy-conscious way. In order to ensure sustainability regarding energy-relevant procurements, we need your support. We kindly ask you to disclose information on the criteria listed below in your offers, if the data are available.

If alternatively, several products apply to our request, you may also list these on the offers. If you have further energy-relevant information (e.g., measurement data), we would appreciate it if you would include these as well.

General requirements for the formulation of an offer, which must be considered by the originator, provided that the relevant information is available and applicable:

- Indication of the service life or running hours of a component or system
- Life cycle consideration
- Energy consumption
- For machinery, preference should be given to drive types such as electricity, steam and compressed air. The aspect of heat recovery is to be considered, if applicable.
- The CO2 footprint
- Plant availability
- Indication of compliance with the applicable energy efficiency classes

The offered item must comply with the current state of the art as well as the applicable regulatory requirements.

If no energy-relevant information has been included on the offers, we may contact you.

Thank you for your support

Yours, Perlen Packaging GmbH, Müllheim
